

I'M FULLY VACCINATED! ...NOW WHAT?

Tested, safe and effective COVID-19 vaccines will help us get back in control of our lives and back to the people and places we love.

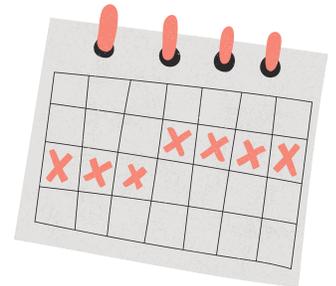

There are currently three vaccines: Pfizer-BioNTech, Moderna and Johnson & Johnson (Janssen). These vaccines help protect you from COVID-19 and are extremely effective in preventing death and hospitalization from COVID-19 with no serious safety concerns noted in any of the clinical trials.

WHEN AM I CONSIDERED FULLY VACCINATED?

Two weeks after your 2nd dose of the Pfizer or Moderna vaccines.

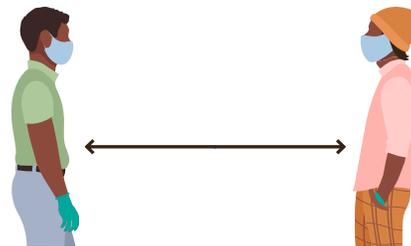

Two weeks after a single dose of the Johnson & Johnson (Janssen) vaccine.

It is a single dose vaccine, so you do not need a second shot.

WHAT TO DO AFTER YOU HAVE BEEN FULLY VACCINATED AGAINST COVID-19?

- Continue practicing the 3 Ws
 - **Wear** a mask
 - **Wait** 6 feet apart
 - **Wash** your hands

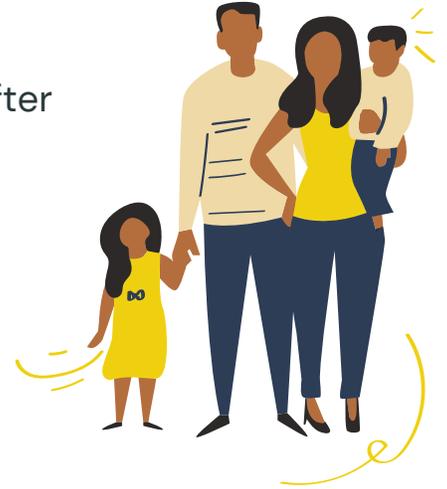

We are still learning about the COVID-19 vaccine and how it can reduce the spread of the disease in communities. Guidance will be updated using the latest science and recommendations from CDC.

- Avoid medium and large-sized gatherings.
- Delay domestic and international travel. If you do travel, you will still need to follow CDC requirements and recommendations.

WHAT SHOULD YOU DO DIFFERENTLY AFTER YOU ARE FULLY VACCINATED?

- You can gather indoors with fully vaccinated people without wearing a mask.
- You can gather indoors with unvaccinated people from one other household without masks, unless any of those people or anyone they live with is at an increased risk for severe COVID-19 illness.
- You do not need to quarantine or get tested if you are exposed to someone with COVID-19 **AND** meet the following criteria:

- ✓ You are fully vaccinated (i.e., at least 2 weeks after getting the second dose in a 2-dose series or one dose of single-dose vaccine)
- ✓ Have had no symptoms from when you were exposed to someone with COVID-19.
- ✓ You live outside of a group setting.
(Individuals in group settings such as group homes, jails, etc., still need to quarantine following an exposure. It is very important to still monitor yourself for symptoms following an exposure. If you develop symptoms of COVID-19, you should get tested and isolate from other people.)

WHAT ELSE SHOULD I KNOW AFTER YOU HAVE BEEN VACCINATED?

- After receiving the vaccine, site reactions as well as flu like symptoms, are common.
 - If your symptoms are not improving or continue for more than 2 days, you should contact your doctor.
- Keep your proof of vaccine card in a safe place.
- Share your positive vaccine experience with others.
